

Gold Heat® ELECTRIC RADIANT FLOOR HEAT for the luxury RV lifestyle.

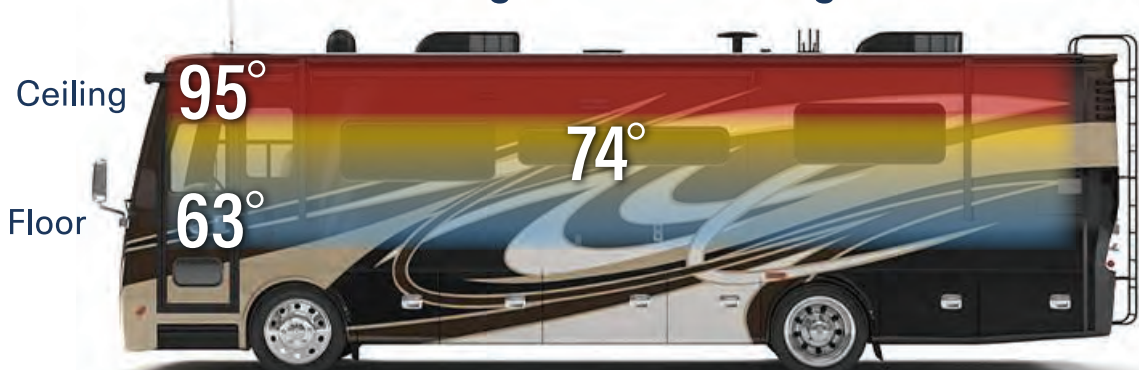

Walking on sunshine!

Heat the inside of a coach with light beams?

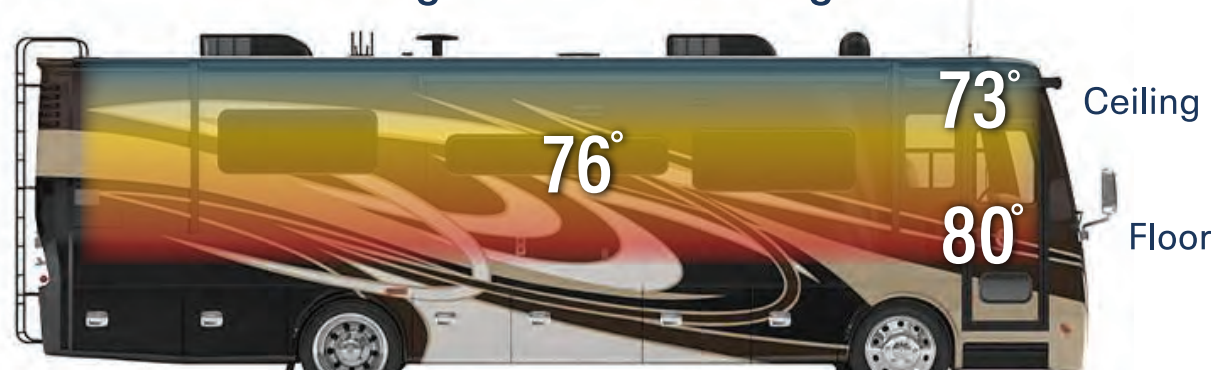

You bet!

Using forced air heating

Using radiant floor heating

What is electric radiant floor heat?

Typical coach heat mat installation

Underneath a coach's tile floor lies custom-made, radiant-floor heat mats specifically designed for the mobility and power needs of a luxury motorcoach. These heat mats run on electricity - approximately 15W per square foot.

What is unique about a radiant floor heat system?

Unlike forced-air heating (that uses a fan to deliver its heat) radiant floor heating doesn't use fans to move its heat. It uses safe, infrared light beams that "shines" from the floor and reaches up throughout the coach. Like sunlight, the beams from the floor is radiating towards you.

Keep that heat, down by your feet!

Electric radiant floor heat is whole body comfort because you are receiving warmth from floor-to-ceiling...not from ceiling-to-floor. In other words, walking on radiant floor heat technology is technically walking on sunshine!

A few reasons why you will love having radiant floor heat aboard your coach.

- Feeling stiff? Feel new again! Radiant floor heat continuously keeps your body warm, comfortable and fluid.
- During the hotter months, use radiant floor heat to keep your feet warm while using the air conditioning.
- You can use radiant floor heat as a primary heat source or use with the forced-air heat system on extremely chilly nights.
- An electric radiant floor heat system is maintenance-free. Set your thermostat and enjoy the warmth.

Luxurious Gold Heat radiant floor heat is aboard these fine manufacturer's motorcoaches.
